

Segment-level metrics vs track density (all noise conditions)

Controls: $\gamma=3$, $\delta=1$, $\phi_{\max}=\theta_{\max}=0.2$ rad, $\theta_{\min}=1.5e-5$, $\tau=0.35$, $\epsilon=calc.(s=3)$, conv OFF, hit-ineff 0, 5 planes $\Delta z=33$ mm, statevector 1BQF
 Fixed here: quantum uses threshold > 1e-6, not $\tau \times max$
 Swept: T, σ_{res} , σ_{scatt} (all combinations)
