Real-event activation spectra — the fragment floor is a *population*, inside the false bulk for every solver
classical
1BQF
QSVT (degree 40, base Hamiltonian)
segments (log)
activation amplitude
false (978129)
true fragments m≤2 (1903)
true m≥3 (12579)
efficiency-first threshold (99% of findable true segments, m≥3, kept)
median over events τ = 0.357; per-event range 0.36–0.36
median over events τ = 0.252; per-event range 0.25–0.25
median over events τ = 0.208; per-event range 0.067–0.28
