

(a) 869 small components, largest 17;
155,371 isolated segments besides

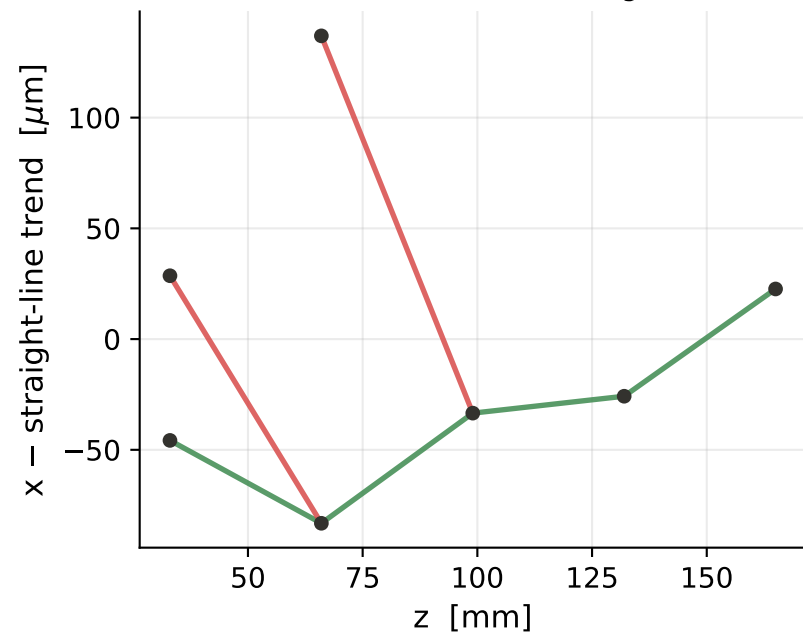

(b) pure-false pair (2 segments, 0 true)

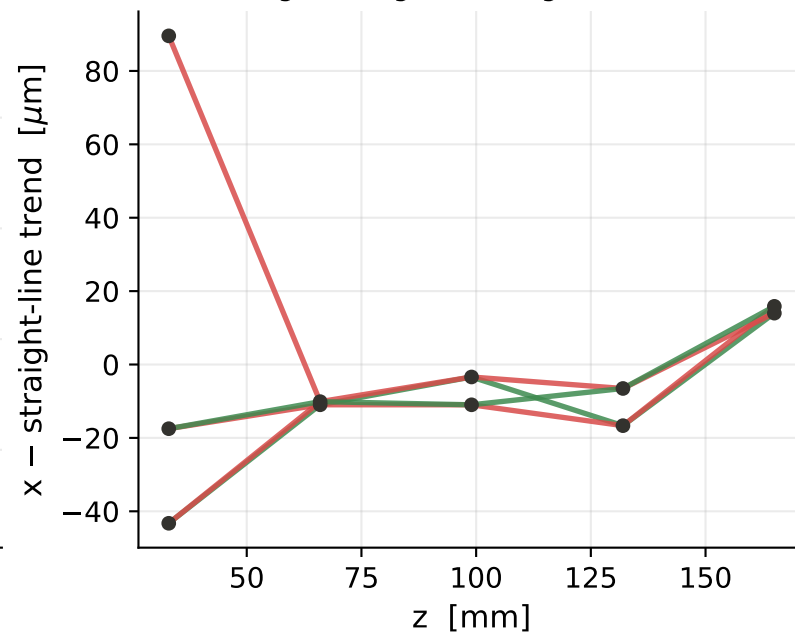

(c) pure-false triple (3 segments, 0 true)

(d) contaminated true chain (6 segments, 4 true)

(e) the largest tangle (17 segments, 8 true)

green: true segments
red: false segments
dots: hits

x is shown relative to the straight line through each component's hits: the μm -scale kinks are what the angular acceptance $\varepsilon = 6.3$ mrad admits
