

Same rule, three clusters: dots = hits (colour = track), green=true segment, red dashed=false segment

(A) isolated FALSE segment

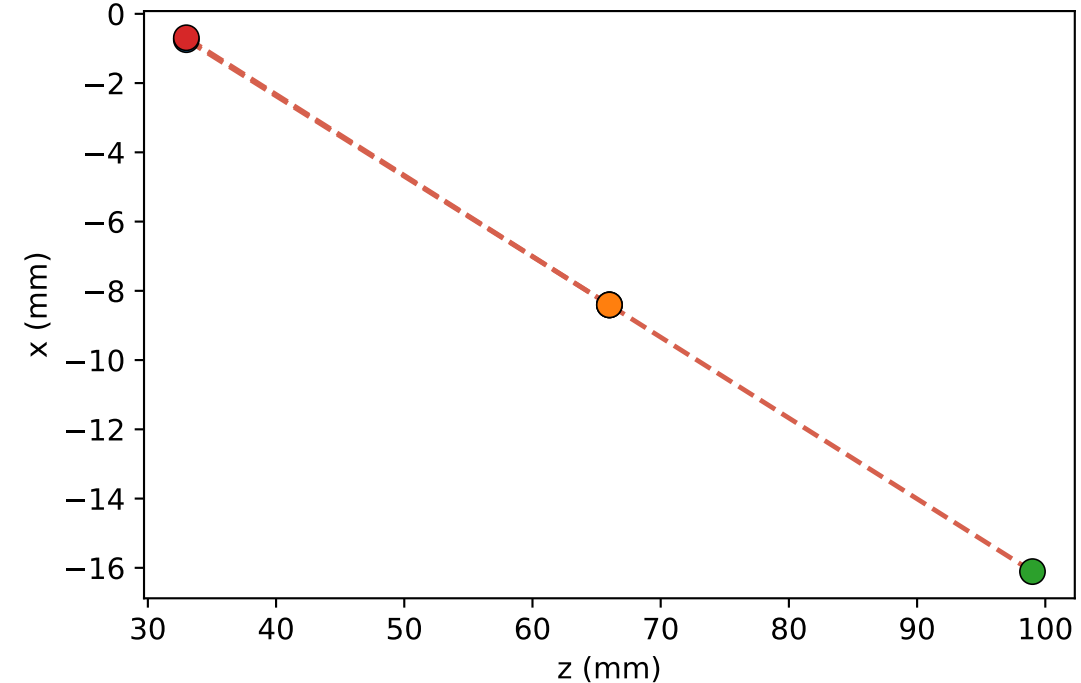

1 cluster, no neighbours $\rightarrow$ eigenvalue $\lambda=4$ (NOTCH/bad)
classical $x=0.25$, quantum $x \sim 0$ $\rightarrow$ correctly ERASED

(B) a REAL track (4-segment chain)

eigenvalues $[2.38 \ 3.38 \ 4.62 \ 5.62]$ (all off-notch = GOOD)
quantum keeps 3/4 (one outer drops to 0.18) $\rightarrow$ track survives

(C) cross-track BRIDGE (false)

eigenvalues $[2.59 \ 4. \ 5.41]$ (2 good + 1 on notch)
hits from $[13, 116, 133, 296]$ $\rightarrow$ FALSE POSITIVE survives
