(a) success probability of one repetition
measured, QSVT ($d = 40$)
$P_{\mathrm{anc}} = 0.44/T$
1BQF estimate $0.25/T$
post-selection success P_{anc}
10^{-2}
10^{-3}
10^{2}
10^{3}
tracks per event T
(b) walk-call budget after amplitude amplification
measured amplified walk calls (QSVT, $d = 40$)
$\propto d\sqrt{T}$
total walk calls per solve
10^{3}
6×10^{2}
4×10^{2}
3×10^{2}
10^{2}
10^{3}
tracks per event T
