(a) efficiency against the threshold
segment efficiency
threshold τ
classical
1BQF (package circuit, stored)
QSVT ($d = 40$)
(b) false rate against the threshold
segment false rate
threshold τ
dashed verticals: each solver's efficiency-first
working point (the lowest threshold keeping 99%
of its true segments); quantum amplitudes norm-matched
to the classical solver on its own working-point support
