Real-event activation spectra — the fragment floor is a *population*, inside the false bulk for every solver
classical
1BQF
QSVT (degree 40, base Hamiltonian)
segments (log)
activation amplitude
false (978129)
true fragments m≤2 (1903)
true m≥3 (12579)
efficiency-first threshold (99% of true segments kept)
median over events τ = 0.25; per-event range 0.25–0.25
median over events τ = 1e-06; per-event range 1e-06–1e-06
median over events τ = 0.00523; per-event range 0.0051–0.0055
